Education

RV College of engineering

Bachelor of Information Science and engineering ; CGPA:7.93

Bangalore,Karnataka

2023 — 2027

Professional Experience

Web Development Intern

09 June 2025 – 15 July 2025

XpertStim IT Services Pvt. Ltd.

<https://industrialwebsite.netlify.app/>

- Developed a fully responsive Industrial Website showcasing industrial services and solutions using **HTML, CSS, JavaScript, and SQL**.
- Transformed raw industrial requirements into interactive and visually structured web sections, showcasing excellent problem solving and real world application skills.
- Designed a clean, responsive UI that improved accessibility and user experience across devices.

Software Developer Intern (Web and Data Analytics)

21 July 2025 – 24 October 2025

Hosadurga Taluk Veerashaiva Mahila Sahakara Sanga Niyamitha (Co-operative Bank)

- Independently developed the bank's official website from scratch, creating a clean, secure, and fully responsive platform that improved customer accessibility and reduced dependency on manual updates.
- Performed end to end data analysis using **Power BI**, converting raw financial records into clear and actionable dashboards used by management for informed decision making.
- Built interactive visual reports to help the bank effectively track **loans, deposits, customer growth and performance** with higher accuracy.
- Collaborated directly with bank officials to understand real financial workflows, demonstrating strong communication, adaptability and quick learning ability.

Projects

MEDIREON - National Emergency Medical Identity & Rapid Access System

- Developed a national emergency healthcare system enabling instant ambulance booking with zero login access, voice commands, real-time GPS tracking, and immediate driver dispatch.
- Created a secure national patient identity with compulsory face recognition, Aadhaar/BPL support, fingerprint option and auto generated Health ID & QR code for accurate patient identification.
- Built a doctor verified medical record system where only hospitals can upload reports, ensuring clean, authentic and instantly accessible records during emergencies.
- Implemented verified doctor/hospital onboarding with license validation and multi mode patient search (Name, Health ID, QR Code, Face Recognition) for fast medical history access.
- Added lifesaving features such as Family Emergency Alerts (live hospital location + doctor contact) and permission based multi hospital access with full audit logs, making the system secure and Transparency.

GRASP - Grievance Recording And Support Platform

- A scalable civic tech solution enabling real time complaint registration with GPS based location tracking and image uploads for accurate issue reporting.
- Built a live red-zone system to track unresolved complaints, reduce duplicates, and improve decision making using real time data.
- Enabled real time dashboards for both citizens and government to monitor complaint resolution progress, improving transparency and faster decision-making.
- Developed an efficient grievance tracking system that accelerated complaint resolution and strengthened citizen-government communication.

Technical Skills

Programming Languages: C, C++, Python, JavaScript

Frameworks & Libraries: React.js , OpenCV, NumPy, Pandas

Developer Tools:Git, GitHub

Technologies: Power BI,

Database Systems: SQL, MongoDB, PostgreSQL

Core Skill:Innovative problem solving focused on real world challenges and Data Structures and Algorithms, Data Analysis, Big Data, and Web Development.

Activities

Team Krushi (Technical Club): Core Team Member

NSS: Member
